
Continuous Bounded Cohomology Of Locally Compact Groups 1st Edition

an invitation to bounded cohomology - egg - an invitation to bounded cohomology 5 in particular, given a compact orientable n -manifold m with additional structure, find a natural definition of $eb(m) = \text{def } eb(tm \rightarrow m)$. i should certainly be a bit more specific here, since after all one way to see the **bounded cohomology via partial differential equations, i** - by the amenable radical [14, 38], it is sufficient to compute the continuous bounded cohomology of semisimple lie groups h without compact factors and with finite center. for such groups it is conjectured [19, 39] that the natural comparison map between the continuous bounded cohomology and the continuous cohomology is an isomorphism. **continuous bounded cohomology and applications to rigidity ...** - continuous bounded cohomology in degree two. we apply this theory to general irreducible lattices in products of locally compact groups: we obtain notably super-rigidity results for bounded cocycles (theorem 16 and corollary 23), rigidity results for actions by diffeomorphisms on the circle (corollary 22) and vanishing of the stable **download continuous bounded cohomology of locally compact ...** - by the amenable radical [14, 38], it is sufficient to compute the continuous bounded cohomology of semisimple lie groups h without compact factors and with finite center. for such groups it is conjectured [19, 39] that the natural comparison map between the continuous bounded cohomology and the continuous cohomology is an isomorphism. **stabilization for sl in bounded cohomology - egg** - the cohomology of the direct limit $sl_{\infty}(c)$ which is notably of relevance for bott periodicity [9]. the continuous cohomology of semi-simple lie groups is also essential for the understanding of the more complicated cohomology of their discrete subgroups [4, 3]. on the other hand, the theory of bounded cohomology, which plays an important **bounded cohomology and applications - eth z** - bounded cohomology for groups and spaces is related to usual cohomology and in fact enriches it by providing stronger invariants. the aim of this talk is to illustrate certain aspects of this philosophy. general references for bounded cohomology are [12, 21, 22, 3]. 1. definition, low degrees. the continuous cohomology $h^*c(g,e)$ of a topological **a useful formula from bounded cohomology** - in continuous bounded cohomology common to these last results ([19, 18, 15, 23, 21]) as well as to the proof in [43] of matsumoto's theorem in [50] and to gromov's proof of mostow rigidity theorem in [61]. more specifically, we prove an integral formula which involves specific representatives of bounded
